DATE MAILED: 02/26/2004				

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)
	09/448,940	BARNES ET AL.
	Examiner	Art Unit
	ANH H DO	2624

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) Responsive to communication(s) filed on 01 December 2003.
 2a) This action is **FINAL**. 2b) This action is non-final.
 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4) Claim(s) 1-27 is/are pending in the application.
 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
 5) Claim(s) _____ is/are allowed.
 6) Claim(s) 1-27 is/are rejected.
 7) Claim(s) _____ is/are objected to.
 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9) The specification is objected to by the Examiner.
 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) <input checked="" type="checkbox"/> Notice of References Cited (PTO-892)	4) <input type="checkbox"/> Interview Summary (PTO-413)
2) <input type="checkbox"/> Notice of Draftsperson's Patent Drawing Review (PTO-948)	Paper No(s)/Mail Date. _____
3) <input type="checkbox"/> Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08) Paper No(s)/Mail Date _____	5) <input type="checkbox"/> Notice of Informal Patent Application (PTO-152)
	6) <input type="checkbox"/> Other: _____

DETAILED ACTION

Response to Arguments

1. In view of the Appeal Brief filed on 12/1/2003, PROSECUTION IS HEREBY REOPENED. The new ground of rejection is set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claims 1-27 are rejected under 35 U.S.C. 102(b) as being anticipated by Balkanski et al. (U.S. Patent No. 5,936,616).

Regarding claim 1, Balkanski discloses:

- compiling and storing a plurality of compression mapping tables for converting uncompressed data representative of individual picture elements to lossless compressed data (col. 10, lines 13-16, teaches the Huffman code tables 117 for compiling and storing a plurality of Huffman code tables; and col. 10, lines 36-38, teaches Huffman tables are used to convert uncompressed data into lossless compressed data);
- applying at least first and second compression mapping tables from the stored plurality of compression mapping tables to subregions of an uncompressed image data stream to compress the subregions (col. 10, lines 36-38, teaches applying the Huffman code tables from the stored Huffman code tables 117 to uncompressed image data, wherein the uncompressed image data is sorted into single component data blocks (i.e., the subregions) as disclosed in col. 28, lines 1-4);
- appending data for the compressed subregions to form a compressed image data stream (col. 25, lines 11-18, teaches a bit-concatenation module 512 for appending data for the Huffman code (i.e., the compressed subregions) to form a coded bit stream).

Regarding claim 2-4, Balkanski teaches using compression code tables to map a prediction error generated by DPCM MOD 511 for each pixel to compressed data code (col. 24, lines 46-68).

Regarding claims 5-7, Balkanski teaches compression code tables are selected based on the entropy level of each pixel block (col. 24, lines 13-15).

Regarding claim 12, Balkanski discloses:

- defining a family of compression code tables for converting uncompressed image data to lossless compressed data (col. 10, lines 13-16, teaches defining a family of Huffman code tables; and col. 10, lines 36-38, teaches Huffman tables are used to convert uncompressed data into lossless compressed data);
- storing the compression code tables in an image compression station and in an image data decompression station (col. 10, lines 13-18);
- selecting at least two of the compression code tables for compression of subregions of an image data stream (col. 24, lines 10-15, teaches selecting two Huffman tables);
- compressing the image data stream in accordance with the selected compression code tables at the compression station for decompression at the decompression station (col. 29, lines 30-37, teaches coding means for compressing the image data stream in accordance with the selected compression code tables at the compression station for decompression at the decompression station).

Regarding claims 18 and 19, Balkanski discloses:

- a data compression station configured to store a plurality of compression code tables or conversion of image data to lossless compressed image data (col. 10, lines 13-16, teaches the Huffman code tables 117 for storing a plurality of Huffman code tables; and col. 10, lines 36-38, teaches Huffman tables are used to convert uncompressed data into lossless compressed data), and to execute a

compression routine in which an image data stream is converted to compressed file by dividing into subregions and each region compressing in accordance with a compression code table selected from the plurality of compression code tables based upon which compression code tables provides optimal compression of the subregion (col. 28, lines 1-4, teaches the uncompressed image data is sorted into single component data blocks (i.e., the subregions), and col. 10, lines 36-38, teaches the Huffman code table selected from the stored Huffman code tables 117 compressing the uncompressed image data to provide optimal lossless compression of subregions);

- a data storage device for receiving and storing the compressed file (col. 10, lines 38-41, teaches a mass storage media for receiving and storing the coded data file);
- an image decompression station configured to store the plurality of compression code tables, to access the compressed file from the data storage device, and to execute a decompression routine in which the compression code tables applied to compress the image stream are applied to decompress the compressed file to reconstruct the image data stream (col. 10, lines 13-18, teaches an image decompression station configured to store the plurality of compression code tables, and Fig. 1: decoder 111b for decompressing the compressed file to reconstruct the image data stream using the same Huffman tables as those in the compression station).

Regarding claim 24, Balkanski teaches:

- a machine readable medium (col. 5, lines 45-49, teaches a computer inherently including a machine readable medium);

- configuration code stored in the machine readable medium, the configuration code including an algorithm for analyzing an image data stream (col. 5, lines 38-45), for compressing subregions of image data stream by application of a plurality of compression code tables (col. 10, lines 36-38, teaches applying the Huffman code tables from the stored Huffman code tables 117 to uncompressed image data, wherein the uncompressed image data is sorted into single component data blocks (i.e., the subregions) as disclosed in col. 28, lines 1-4), and for compiling the compressed subregions into a compressed data file (col. 25, lines 11-18).

Regarding claims 9, 16, and 26, Balkanski teaches computation of the compressed data lengths and selecting the compression code tables providing the shortest compressed data lengths for each subregion (col. 24, lines 56-68).

Regarding claims 14 and 20-22, Balkanski teaches analysis of the image data stream for data representative of an identification of an image encoded by the image data stream (col. 6, lines 1-4, teaches VBIU 102 analyzing the stored video sequence in the external buffer memory for addresses identifying 8 x 8 pixel blocks).

Regarding claims 10 and 17, Balkanski teaches the number of compression mapping tables may be encoded with at most two bits of data (col. 24, lines 11-15).

Regarding claims 11, 13 and 23, Balkanski teaches encoding of identifiers of the selected code tables within the compressed file (col. 6, lines 52-54, teaches compressing a group of 64 pixels, expressed as an 8 x 8 matrix) and analysis of the identifiers for selection of the same compression code tables for decompression of the compressed file (Fig. 1: decoder 111b for decompressing the compressed file to reconstruct the image data stream using the same Huffman tables as those in the compression station).

Regarding claims 8 and 15, Balkanski teaches application of DPCM MOD 511 for determining a difference between a predicted pixel value and an actual pixel value and wherein the compression code tables are applied to encode the difference values (Fig. 6a(1) and col. 24, lines 46-68).

Regarding claim 25, Balkanski teaches storing a family of candidate compression code tables on the machine readable medium (Fig. 1: 117).

Regarding claim 27, Balkanski teaches the code is installed on the machine readable medium via a configuration network link (col. 5, lines 45-55).

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ANH H DO whose telephone number is 703-308-6720. The examiner can normally be reached on 5/4-9.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, DAVID K MOORE can be reached on 703-308-7452. The fax phone

number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
